Sai Ganesh Pala Shanmugam

✉ pss.ganesh.2001@gmail.com | (437) 818-0485 | St. John's, NL | github.com/SaiGaneshPS

EDUCATION

Memorial University of Newfoundland **Expected: Dec, 2024**
Masters in Artificial Intelligence Newfoundland and Labrador, Canada

- Current GPA: 3.83/4.00
- Board Director for AI, Graduate Student Union (Nov 2023 – Nov 2024)

Amrita Vishwa Vidyapeetham **Graduated: July, 2023**
B.Tech, Computer Science Engineering with Artificial Intelligence Coimbatore, India

- GPA: 8.68/10.00
- Relevant coursework including: Mathematics for Intelligent Systems, Data Structures and Algorithms, Python for Machine Learning, Deep Learning for Signal and Image Processing & Reinforcement Learning.

WORK EXPERIENCE

Panlingua **May. 2022 – Aug. 2022**
Computational Linguist Intern Delhi, India

- Verified the creation of accurate language datasets by my team.
- Trained and compared ML/DL models for hate speech classification.
- Developed SVM and BERT models for English and Spanish text classification.

PUBLICATIONS

- IEEE Conference paper
  P S Sai Ganesh, Kabilan N, Adithan P, Sajith Variyar V V, Sowmya V, "Artificial Intelligence Framework for COVID protocol detection", 2022, International Conference on Computing, Analytics and Networks.

PROJECTS

AI-Driven Grocery Management System **Sept. 2024 – Nov. 2024**

- Trained a FasterRCNN model for text localization (bounding boxes) in receipts, achieved 0.81 F1-Score.
- Built a recipe recommendation system by training custom GPT-2 model on food.com data.
- Created a UI using Kivy that recommends recipes based on ingredients available from receipts (OCR), runs on android devices.

Skew Detection in Receipts using OCR **Sept. 2022 – Dec. 2022**

- Created custom datasets with 5 resolutions, accounted for data cleaning and validation.
- Compared state-of-the-art deep learning models to documenting results for the custom dataset.
- Models dealt with: ConvNext, Swin Transformer, ViT, Vgg19, MobileNet etc.

Deep Learning Architecture for PCG Classification **Nov. 2021 – Dec. 2021**

- Built a deep learning architecture that classifies PCG signals by converting them into images(spectrograms).
- Achieved a classification accuracy of 92.7%.
- Improved performance of existing architecture by utilizing both spectrogram and normalization together.

SKILLS & INTERESTS

- **Libraries:** Numpy; Matplotlib; Sci-kit learn; OpenCV; Pandas; Tensorflow; PyTorch; PyTesseract; Flask; Kivy;
- **Languages:** Python; Java; SQL; JavaScript; Ruby; Julia; MATLAB; HTML;
- **Soft Skills:** Teamwork; Time Management; Organized; Detail-Oriented; Communication Skills; Positive Learning; Critical Thinking;
- **Interests:** Badminton; Reddit; Gaming; Travelling; Music;
